- 4 Volume Adjustments
- 38 Types Of Ringtones
- Loud Sound
- Low Power Design

RINGO WIRELESS BELL

Smart Wireless Door Bell

Material: ABS
Finish: Moulding
Color: White

NO SIGNAL INTEREFENCE

The chipset of the Ringo Wireless Bell is designed in such a way that there won't be any interference between multiple Ringo Wireless Bells. This enables the user to have more than one device at home or the workplace without any hassle.

LONG RANGE TRANSMISSION

Ringo Wireless Bell has a very long transmission range. In an open area where there are no barriers, the lab-tested transmission distance is 100 meters.

STRONG PENETRATION

Ringo Wireless Bell has a strong penetration capacity of 10-30M. This reduces the data transmission loss and blocking between the bell and the wall.

LOW POWER CHIP AND AUTOMATIC STANDBY

The device is designed to last longer with a low-power-consuming chip. The chime and the bell button module don't consume any power while in standby mode.

BLACK AND WHITE MINIMALISTIC DESIGN

The classic black-and-white minimalistic design gives Ringo Wireless Bell a universal style that matches any exterior or interior design concepts.

ERGONOMIC DESIGN

The Ringo Wireless Bell uses an anti-fingerprint matte material and an ergonomic mechanical key that gives a light touch feel, making the operation very comfortable and smooth.

BATTERY AND POWER

Power Supply: 27A, 12V alkaline battery
